

Licenses for BLUEPIRAT data loggers

Licenses for all BLUEPIRAT data loggers

CCP (Can Calibration Protocol).

This license lets you record the exchange of data between control units synchronously in the form of a CCP protocol using the CAN interface.

DLT (Diagnostic Log and Trace).

This option lets you receive and record DLT messages using the Ethernet and serial interfaces. When using Ethernet, it is also possible to send control messages for online configuration of the ECU.

Video recording.

This option lets you record up to four analog video signals using a video server on the BLUEPIRAT Mini. Alternatively, an Ethernet camera can be recorded via the Ethernet interface.

XCP (Universal Measurement and Calibration Protocol).

The XCP calibration protocol defines communication between control units and a master for the data exchange. The XCP license lets you poll these internal control unit signals. In contrast to CCP, the XCP protocol generalizes the access to control units so that different transport layers can be used. Our license supports CAN and Ethernet.

Please note:

A license is always valid for one device; it is associated with the serial number and cannot be transferred to another device.

Licenses for BLUEPIRAT data loggers

Licenses only for the BLUEPIRAT Mini.

BroadR-Reach® logging.

This add-on lets you record a BroadR-Reach® link using the two integrated BroadR-Reach® interfaces of the BLUEPIRAT Mini CAN. These interfaces replace two of the four RJ45 Ethernet ports.

MOST150 streaming.

This software add-on lets the BLUEPIRAT Mini MOST150 record audio and video data passing through the MOST150 streaming channel.

Licenses only for the BLUEPIRAT 2.

GPS (Global Positioning System).

Positioning is easy with the BLUEPIRAT 2. The add-on includes a GPS transmitter suitable for automotive applications which can be switched on and off. It is easy and user-friendly to use via the client software. The GPS data is provided in MAGNA Telemotive trace file format (*.tmt).

MOST150 streaming.

This software add-on lets the BLUEPIRAT 2 MOST150 record audio and video data passing through the MOST150 streaming channel.

Please note:

A license is always valid for one device; it is associated with the serial number and cannot be transferred to another device.
