

IN SIGHT AND UNDER CONTROL

LIVE TRACKING OF TEST DATA

BLUEPIRAT
:BY MAGNA

Responsive display via tablet, smartphone
(iOS, Android, Windows) or laptop web browser.

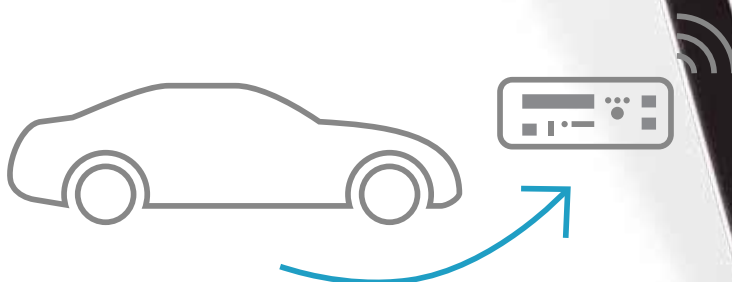

YOUR NEW GLANCE AT ALL TEST DATA LIVE VIEW

Why wait with the evaluation of the test until the test drive is complete? Wouldn't it be perfect to have access to all relevant data already during the drive – and to be able to present intelligently and clearly prepared data live?

Live View is the solution: It shows selected bus data of a BLUEPIRAT data logger in the smartphone, tablet or laptop browser. Its graphical representations are comprehensible at first glance: Ideal for quick status checks or if important passengers such as executives or cooperation partners want to get a picture themselves.

Various options for the graphical representation of live measured values, such as speedometer or stacking/line diagrams.

Flexible arrangement, automatically adjustable window sizes. Convincing look and feel – regardless of the operating system (iOS, Android, Windows)

Three simple steps:

- 1 Configure Live View on the computer – set the desired signals (CAN, LIN, Digital IN, Analog IN, Flexray) for the display.
- 2 Connect the smartphone / tablet / laptop with the BLUEPIRAT data logger (via WLAN / RJ45).
- 3 Open the browser, enter the IP address of the BLUEPIRAT.

The most important information quickly and practically available.
