

Clutch Module

Magna Powertrain offers modular design, development, testing, and production of clutch modules.

Features and Specifications

- Expertise in all aspects of clutch module design, development, testing, and production
- Various forming technologies and machining of ferrous and aluminum die casting abilities are in place to support all clutch assembly components

Competitive advantage/differentiators

- Multi-plate clutch assembly, development and test facilities are already in place at several MPT locations

Applications/benefits

- Currently in production
