

Planetary Carrier Modules

Magna designs, develops, tests and manufactures a wide variety of carriers for transfer cases, transmissions and eDrive gearboxes.

Features and Specifications

- Expertise includes powdered metal carriers, forgings and stamped designs
- Can supply individual parts to completely assembled drop in modules
- Stamped designs can save mass where applicable
- Integral park gears if required

Competitive advantage/differentiators

- Stamped carrier design for mass savings if design allows, including joining to clutch housing
- In-house design capability
- Durability & UTS test capabilities
- Complete machining and assembly capability
- Laser welding expertise

Applications/benefits

- All passenger cars, SUVs and LCVs
- Immediately available
- Currently in production
