

Magna Exteriors (Banbury UK)

Gender Pay Gap Report

Gender Pay Gap – The results reported April 2022

Magna Exteriors (Banbury) Ltd is a supplier of automotive exterior plastic parts. We have 2 Sites in Banbury, Oxfordshire. Our results presented below are based on data as at 5 April 2021. The gender pay gap is a measure of the difference between men's and women's average earnings across our business; it is not a measure of equal pay.

Our headcount split at 5 April 2021 was 76.0% male against 24.0% female. This is reflective of the industry sector in which we operate.

This table illustrates the median (middle) and mean (average) gender pay and bonus gap based on hourly rates of pay (male compared to female).

	Median	Mean
Hourly Pay	43.5%	24.6%
Bonus Pay	20%	78%

A key reason for the hourly rate differential is that there is a significantly higher proportion of males within the higher paid executive and technical roles such as Senior Managers and Engineers. These roles attract a higher market hourly rate than less skilled roles. All our manufacturing operatives are the same regardless of gender. We are actively promoting a more flexible working approach which may in turn attract, retain and encourage female applicants/current employees to train/apply for more senior roles.

There is only a small proportion of women in senior posts, where there is eligibility for a performance related bonus, which is reflected in the large gap on bonus pay. However the qualifying criteria are based on eligibility to the scheme rules as opposed to gender. Therefore we expect this gap is expected to decrease in the long term.

	Received Bonus	Received No Bonus
Women	91%	9%
Men	89%	11%

The proportion of men and women in each quartile band

This table illustrates the proportion of males and females in each quartile band. This is again indicative of our majority male workforce.

	Lower Quartile	Lower Middle Quartile	Upper Middle Quartile	Upper Quartile
Male	72%	69%	80%	92.40%
Female	28%	31%	20%	7.60%
